- Structural calculation
- Physics
- Mathematics

### CNA - São Paulo - SP (Brazil)
English Course | Jan 2009 - Dec 2011

## LANGUAGES

Portuguese | ●●●●●●●●●●
English | ●●●●●●●●○○

## PROFESSIONAL EXPERIENCE

### Software Developer
Inspire IT Portugal | Jan 2020 - Present (Portugal)

- Development in full-stack (C#, .NET, ASP.NET, HTML, CSS, jQuery and JavaScript)
- SQL Server for database management
- Visual Studio for development
The project that I am in, is GLLG, a platform about education management in Perú. Most of the time, I develop the back-end in C# and .NET, using entity framework (is changing to Dapper), and the front-end I am doing with ASP.NET, using HTML and CSS too, and jQuery.
We use JIRA to project management, using Kanban methodology and bitbucket as coding management platform.

### Logistics and Warehouse's Manager
Brodheim Group | Jul 2017 - Oct 2019 (Portugal)
- Merchandise management
- Partial and general inventories
- Logistical control between chain stores
- Contacts with suppliers

### Math and Physics teacher
Study Center Primavera | Jan 2017 - Jul 2017

- Explanations and classes, in mathematics and physics, for students from the 1st to the 12th grade.

### Team Coordinator
Thousand Solutions | Mar 2016 - Jan 2017 (Portugal)
- Direct customer acquisition for energy business contracts
- Manage team for that same function
- Lead daily morning meetings

### Salesperson and Sub-manager
Levi Strauss & CO | Jan 2014 - Dec 2015 (Brazil)
- Team management
- Sale of products to the public

# PERSONAL PROJECTS

## WALD PROJECT

- Co-founder of WALD Project, a software that creates and configure a RailsApp from scratch, just with the visual schema from database.
In that project, I used JavaScript, HTML5 and CSS3 to build the public pages (404, 500), alerts, confirmations and buttons; bootstrap for default designs changing just specific layouts with CSS; GitHub API for omniauth authentication; Heroku for deployment in a server; and PostgreSQL for our relational database; Ruby on Rails for back-end, creating a default template and using interpolation for each option choose by user.

## RABBIT

- Rabbit is a website that simulates AirBnb (giant website that is based on RoR), the site have the same AirBnb functions, rent an animal - in our case - , have the animal card in map (using API from mapbox), different type of user (with authentication for admin and normal user, animations...
In that project, I used HTML5 and CSS3 (with bootstrap also) for the pages design, JavaScript for alerts animations, drag and drop for weekly top5, Heroku to deploy on a host service, SQLite3 for the database and Ruby on Rails for all the back-end.
